Real wood product images are of a natural product. Part of its character and charm is its naturally occurring and individual variations in shade and tone. Therefore, the colours shown here may not be an exact representation of the product.

Although every effort has been made to reproduce the colour of the real wood and laminate products shown in this brochure, there will be slight variations in actual colours due to printing limitations.

LIVE IT  
AND  
LOVE IT

A high quality wooden floor from elka can make an immediate and significant difference to your home, whether you choose laminate, real wood engineered or solid wood flooring. From busy family homes to the most pristine designer spaces, whatever look you want or budget you have to work with, elka has the answer.

Elka brings you the best range, the best quality and the most durable finish, every time.

THE  
PRACTICAL  
CHOICE

Not only will you love having an elka floor in your home, everyone else will love it too. In fact, a clever choice of this quality, practical and easy to look after floor will actually add value to your property.

IT TAKES ALL KINDS

The beauty of an elka floor is that it has enough strength of character to enhance any style of interior.

14mm Smoked Hand Sawn Oak

12.5mm Double White Oak

WHY THE ENVIRONMENT MATTERS IN YOUR HOME

The choice of a good quality floor from elka is a smart one both for you and the environment. Our flooring is both designed to last and to be admired, so you are unlikely to want to change it for a very long time. This is especially true for our engineered and solid wood boards which actually become more beautiful with age.

14mm Super Rustic Oak

SUSTAINABLE FORESTRY

Every year, more and more timber is available from sustainably managed forests, so every year, we improve and increase our environmentally friendly products.

sustainable choice

**MINIMUM WASTE - MAXIMUM EFFICIENCY**  
Our sophisticated production facility ensures that there is no waste product and that every precious resource is utilised.

ELKA & THE ENVIRONMENT

We might specialise in creating great home environments, but we also take great care to do everything we can to look after the environment around us. That's why as manufacturers and importers, we understand the importance of sourcing the most responsibly managed raw materials possible to make our flooring. This includes developments like the creation of laminate and engineered floors that can be installed without the use of an adhesive due to the revolutionary Uniclic® system.

Where possible, we insist upon maintaining a certified chain of custody for the majority of the timber we buy. That's why we're so proud that more than half of our product range is FSC® (Forest Stewardship Council®) or PEFC (Programme for the Endorsement of Forest Certification) certified.

These awards are given to responsibly managed forests that respect the legal system, land usage rights and the rights of

indigenous peoples and their workers, in addition to guaranteeing that felled trees are replaced with saplings.

These unique international non-profit, non-governmental certification systems represent some of the largest environmental movements in the world and we are excited and proud to be a part of them. This means that when you purchase an elka floor, you can be proud that you are choosing to furnish your home with one of the world's environmentally friendly products: natural wood from a responsibly managed forest. For any timber that isn't certified, we always ensure that it is from well-managed sources.

For our FSC and PEFC certified products, please look for the following logos.

# FIVE REASONS TO CHOOSE AN ELKA FLOOR

## IT'S A GREAT INVESTMENT 01

An elka floor is always a quality floor, so replacing it will be something you won't have to worry about for years or even decades. By selecting one of our floors, you are choosing a style that has remained a desirable and attractive part of interiors for hundreds if not thousands of years. Unlike a carpet or piece of upholstery, engineered or solid wood are floors that simply become more beautiful as time goes on.

## A FLOOR THAT'S ALWAYS IN FASHION 02

A well made, quality wood or laminate floor from elka will never go out of style. Its subtle, warm tones will always perfectly complement the surrounding interiors no matter what interior design changes may occur over time. This adaptability is a key reason why an elka floor remains the favourite choice for many homeowners.

## IT'S A BREATH OF FRESH AIR 03

There's nowhere for dust, dirt and mites to hide in an elka floor, so this is the perfect choice for any family home. The EPA (Environment Protection Agency) estimates that carpet houses between 5,000 and 10,000 mites per square foot, so installing an elka floor would significantly reduce the risk of airborne allergens causing problems in your home.

## ADAPTABLE AND FLEXIBLE 04

Living with an elka floor is like inviting nature into your living space. The character of the natural grains of wood are entirely unique and by also selecting a floor that can be used with underfloor heating, you can enhance the warmth and comfort of your interior.

## THE FLOOR THAT WORKS WITH YOU 05

An elka floor is designed for family life. This means that it can easily cope with wear and tear, and any required maintenance is simple for a homeowner to complete themselves. It's also worth remembering that an elka floor is easy to maintain and will be equally as appealing to anyone who may want to buy your house in the future, so a clever choice could actually add value to your property.

THE  
PROFESSIONAL  
CHOICE

VICKY WHARTON  
INTERIOR DESIGNER

“I’ve been working to create the perfect interiors for my clients for over 20 years and although the solution for each one is entirely different, I always appreciate the flexibility that a well chosen wooden floor brings them. Whatever the colour scheme or the style, it always provides a character-rich, but subtle foundation for a room design.”

[vicki.duluxdesignservice.co.uk](http://vicki.duluxdesignservice.co.uk)

LEE THOMPSON  
PROCUREMENT MANAGER

“As a wood floor manufacturer and distributor, we are dependent on natural resources and are committed to our responsibility towards the environment. We continually strive to ensure that sustainability is at the forefront of our purchasing. This means that when you purchase an elka floor, you can be proud that you are choosing to furnish your home with an environmentally friendly product: natural wood from a sustainably managed forest.”

[www.elkaflooring.com](http://www.elkaflooring.com)

NEIL MATHEWS  
ARCHITECT

“When we are creating living spaces, we are always designing with the end user in mind and we have found that there are very few spaces, either contemporary or more traditional, in which a well-made wooden floor wouldn’t work. The recent advances in engineered board technology which allow a wooden floor to cope with the rigours of underfloor heating has also made our choices a lot easier.”

[www.neilmathewsarchitects.com](http://www.neilmathewsarchitects.com)

TIM NICHOLAS  
PROFESSIONAL INSTALLER

“As a wooden floor retailer and fitter, our reputation is very important to us. In order to maintain our high standards, we always use the best quality wood flooring products available. We take pride in our skills, our high standard of craftsmanship and our Installer accreditation. That is why we choose elka products as we feel that they reflect our business standards and help to maintain our reputation in the marketplace.”

[tcflooring46@yahoo.com](mailto:tcflooring46@yahoo.com)

# elka

Whatever type of floor you choose, elka can bring you beauty and style within a wide range of budgets.

laminate  
flooring

Elka laminate flooring is such an effective choice that can be used in all kinds of spaces, either with or without underfloor heating. It’s simple and quick to install with the unique Uniclic® system making it ideal for DIY projects. It looks great and is hardwearing so it will remain as pristine and beautiful as the day it was installed.

real wood engineered  
flooring

Elka engineered flooring is a truly practical product, chosen for its strength, flexibility of installation and overall stability. It perfectly mimics a solid wood floor, but is actually made of three or more layers of real wood with an upper layer of genuine hardwood. Its core strength comes from each layer being stacked in opposite directions, so it can be used in most areas of the home including conservatories and in conjunction with underfloor heating.

solid wood  
flooring

With plenty of character and style there are many homes that just wouldn’t be complete without a solid wood floor. As a completely natural product, the grains and colours of elka solids create an ambience with real character and a sense of long life and permanence. Elka solids will add beauty and elegance to any interior.

# BRINGING THE BEAUTY OF NATURE INTO YOUR HOME

The timeless elegance of a wood floor brings warmth and beauty to every home. The variety of styles, colours and species give you a wonderful range to choose from and allows you to put your unique stamp on your living space.

Our laminate range reflects the beauty of nature, while still maintaining a consistent quality throughout every board. Our real wood engineered and solid ranges use high grade hardwood that has been primarily selected for its hardwearing quality to ensure dimensional stability and long lasting durability.

The real wood products capture all the rustic qualities of wood and bring the very essence of nature into your home. Each floor board is unique, enriched with naturally occurring characteristics such as knots of various sizes, flared grain patterns, burls, sapwood and mineral streaks. These are characteristics of each species' individual growth process, and are all influenced by region, sunlight, climate and the soil. There are two types of knots; live knots which showcase the beautiful density of the spiral grain and dead knots which are repaired with a rich coloured filler. Any splits or cracks are filled and add a lively character to the unmistakable quality of a natural product. The colour variation within each plank reflects naturally occurring mineral and sapwood streaks and are even further enhanced when stained or treated.

14mm Super Rustic Oak

14mm Smoked Hand Sawn Oak

14mm Dutch Oak

## THE NATURAL BEAUTY AND CHARACTERISTICS OF WOOD FLOORING

Due to the increasing interior trend for flooring to have even more character, we have increased our real wood engineered range. Our new Super Rustic Oak showcases many of these features. We have also introduced two new smoked products where the smoking produces more colour variation than staining. The result is much warmer and the natural characteristics are even more enhanced.

Our new Dutch Oak real wood engineered floor is a wonderful example of the rich variety of sapwood and heartwood. A classic design, it equally complements antique furniture or works well in a modern contemporary environment. Due to the distinctive pattern, care must be taken when laying the boards, but the Uniclic® system means that this classic style is now achievable in any home.

# laminate flooring

There's no easier way to add some contemporary charm to your home than with our durable, design led, cost effective range of laminate flooring. Choose from sixteen timber effect designs and two types of board to transform your home quickly and easily.

Elka's laminate range is one of the most superior quality laminate flooring ranges currently available on the market. Designed to look great and last the distance, we apply strict standards to each board, ensuring maximum strength and a flawless, warp-free finish that makes it look every bit as beautiful as a natural

wood floor. The v-groove technology is an advanced bevel edging which helps to create a look that reflects the natural qualities of wood flooring.

The range features the unparalleled and technically superior Uniclic® system. Its glue-free installation process makes it fast and easy to lay or re-lay anywhere, meaning you can take it with you if you move house. Each board locks together securely, ensuring a seamless joint that won't allow dust or dirt to gather. With the lifetime warranty on the Uniclic® system, it means you can enjoy a quality finish for years to come.

NEW RUSTIC DÉCORS

# real wood engineered flooring

With all the aesthetics of a real wood floor, but without any of the restrictions, real wood engineered flooring is a practical design choice for any home. Choose from five depths of product available in a variety of real wood finishes.

When laid, an elka real wood engineered floor is virtually indistinguishable from a solid wood floor. This is thanks to the product's unique structure, which includes a generous surface layer of between 2.2mm and 6mm of real wood, making it possible for all engineered floors to be sanded and refinished. The strength of each board comes from three or more layers of wood laid in opposite directions. This helps to avoid any issues with contraction or expansion, making it perfect for use in areas where traditional hardwood flooring cannot be used, such

as in conservatories or in conjunction with embedded underfloor heating. The simplicity of its construction makes it perfect for use in DIY projects and thanks to its strength, it can easily be installed as a floating floor.

We have introduced more UV oiled wood floors into our engineered range. Advances in UV cure technology have resulted in a finish that is more versatile, hardwearing and easy to maintain whilst retaining that natural aesthetic of wood. Oiled wood floors require an intermittent maintenance programme. Cleaning the floor with elka clean and applying a coat of elka protect oil at least once a year won't just remove scuffs and scratches, but will improve its durability and it will also restore your floor to that vibrant piece of nature you fell in love with first time round.

## STRUCTURAL COMPOSITION OF AN ENGINEERED BOARD

Carefully selected real wood wear layer

Latest technology machining for ultimate stability

Engineered ply construction for a stable inner core

Superior glue throughout ensures a long carefree life

Selected veneer backing for added stability

## FEATURES & ADVANTAGES

Can be laid over embedded underfloor heating

Can be sanded and refinished

Made from 100% natural wood

# solid wood flooring

Made from high quality premium, solid timber, the random length boards and natural colours of this range of solid flooring will add natural character and instant warmth, making this flooring a solid investment for any home.

The grains and colours of elka solids create an ambience with real character and a sense of long life and permanence, adding beauty and elegance to your interior.

Each elka solid wood board is made from 18mm of 100% solid oak sourced from responsibly managed forests and are all FSC® certified. Created from high-grade timber, we only select

the most aesthetically pleasing grains for use in this exclusive range and offer a range of stained, oiled and lacquered finished planks.

Solid wood floors can be fitted using numerous techniques. These include: adhering it direct to a sub floor, nailing or screwing it to timber, or floating it using elka 3in1 underlay. For more information visit [www.elkaflooring.com](http://www.elkaflooring.com).

Our strict production process means that every board is checked by hand at least three times before being packaged, guaranteeing a high level of quality in every detail of your new floor.

# INSTALLING AND MAINTAINING YOUR ELKA FLOOR

## PREPARATION IS EVERYTHING 01

To achieve the perfect finish and ensure good performance, preparation from the ground up is key. Elka's range of primers, DPM's and underlays complements its flooring range to overcome the most common problems.

## FOR A SECURE FIX 02

The elka range of high performance fixing products provide the right solution for every type of flooring. Whether it's a high performance adhesive for solid wood and engineered flooring or Tongue Tite screws for a DIY fix. Elka even have a specialist fitting kit for the world renowned Uniclic® locking system on our laminate and 12.5mm /14mm engineered flooring.

## FOR THE PERFECT FINISH 03

With elka accessories, the right solution is always at hand. From real wood veneer profiles and scotia to complement real wood flooring, to the multifunctional 5in1 profile, a flexible finishing profile utilising the latest design technology to match your laminate floor perfectly. This easy-to-use profile allows you to simply trim off the area of the product not required to create one of five finishing solutions which even includes stairs.

## MAINTAIN THE ELKA STANDARDS 04

Keep your wood floor looking as good as the day it was laid. Flooring is a long term investment and elka has a range of products to maintain or revive the finish of real wood and laminate floors. The specialist elka maintenance products have all been tested to ensure ease of application, performance, durability and compatibility with our full range of flooring.

EVERYTHING YOU NEED TO  
PREPARE YOUR ELKA FLOOR

Elka PU Primer and Elka DPM for concrete sub floors help to provide the correct sub floor conditions to lay your elka floor. They are suitable for use prior to fitting all types of flooring - laminate, real wood engineered and solid wood flooring.

Our comprehensive range of underlay is designed to protect and secure your elka floor. Elka lay is perfect for any location, but you may prefer to choose the added advantages of DPM, additional cushioning underfoot and sound proofing. Elka 3in1 lay has a practical integrated adhesive system for ease of installation of solid and engineered flooring. All our other underlays are suitable for use with laminate and real wood engineered flooring.

Superb product for screw fixing solid or real wood engineered (18mm+) flooring to any wood substrate.

200no. per box and 1no. adaptor bit

Designed to fix tongue & groove flooring, these 3.5x45mm screws feature the smallest heads ever, enabling them to be countersunk tidily into the rebate above the tongue so as to offer no obstruction to the matching groove on the next board.

Features and Advantages

- No need for glue or to hire a nail gun
- Easy to install in difficult locations
- If necessary, you can remove boards without damage in order to gain access to underfloor plumbing etc.
- No need to drill pilot holes, even in hardwoods.
- One size fits all boards (3.5 x 45mm)
- Boxed in 200's (covers up to 10m<sup>2</sup>)

Suitable for use with **solid** and **real wood engineered** flooring.

elka  
FITTING KIT

For fitting laminate and most Uniclic® flooring quickly and easily.

1 tapping block, 1 pull bar and 40 spacers

Designed to make fitting your Uniclic® floor as easy as possible without risk of damaging it.

Features and Advantages

- The spacers maintain an expansion gap around perimeter
- Pull bar allows you to pull planks together at the end of rows
- Tapping block protects edges of the boards when tapping them together.

Suitable for use with **laminate** and **real wood engineered** flooring.

EVERYTHING YOU NEED TO  
FINISH YOUR ELKA FLOOR

Real wood profiles and adaptors suitable for  
**solid and real wood engineered** flooring.

**Elka 3in1 Real Wood Profile** is a flexible finishing profile designed to complete your real wood flooring utilising the latest design technology with a practical multifunctional profile moulding. This easy-to-use profile allows you to simply trim off the area of the product not required to create one of three finishing solutions.

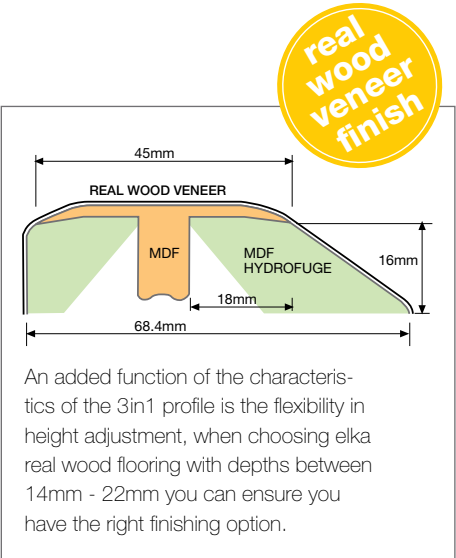

**Expansion Profile**  
to cover expansion gaps  
between two adjacent flooring  
products of the same height.

**Adaptor Profile** for use when finishing  
between two adjoining floor coverings  
where the adjacent floor covering is  
of a lower height e.g. carpets or vinyl.

**Edge Profile**  
to finish the flooring where  
a dressed edge is required  
eg. against a wall or window.

**Features and Advantages**

Real wood veneer finish  
Flexible - 3 profiles in 1  
Simply trim to the required profile type  
using the handy trimmer included in each pack.  
Available in two lengths:  
930mm in lacquered white oak, unfinished  
white oak and walnut.  
2150mm in lacquered white oak or unfinished  
white oak. (Unfinished white oak allows  
the flexibility to either oil, stain or lacquer  
the profile on-site to match your floor.)  
Suitable for use on floors between 14-22mm  
with the supporting adjustable track provided.  
Extra height adjustment can be gained  
when applied using elka bond.

Simply trim off the area of the product  
not required using the supplied trimmer.

**Elka 5in1 Laminate Profile** is a flexible finishing profile designed to complete your laminate flooring utilising the latest design technology with a practical multifunctional profile moulding. This easy-to-use profile allows you to simply trim off the area of the product not required to create one of five finishing solutions.

**Expansion Profile**  
to cover expansion gaps  
between two adjacent flooring  
products of the same height.

**Adaptor Profile** for use when finishing  
between two adjoining floor coverings  
where the adjacent floor covering is  
of a lower height e.g. carpets or vinyl.

**Edge Profile**  
to finish the flooring where  
a dressed edge is required  
eg. against a wall or window.

**Transition Profile**  
the perfect link  
between elka laminate  
flooring and carpet.

**Stair Profile** to seamlessly  
finish stairs, choose from  
one of several options  
available. Simple and fast  
to use, this profile must be  
installed in combination with  
the appropriate sub-profile.  
Sub profile sold separately.

**Features and Advantages**

The perfect match for your laminate floor  
Flexible - 5 profiles in 1  
Simply trim to the required profile type  
using the handy trimmer included in each pack.  
Dimensions: 2150 x 48 x 13mm  
Suitable for linking a wide variety of flooring  
Economical - as this is a multipurpose product,  
you can utilise any spare pieces of profile

**With elka 5in1, you always have  
the right solution to hand.** Simply  
trim off the area of the product not  
required using the supplied trimmer.

EVERYTHING YOU NEED TO  
FINISH YOUR ELKA FLOOR

Real wood profiles and adaptors  
suitable for **laminate**, **real wood  
engineered** and **solid wood** flooring.

elka SCOTIA

classic and 8mm v-groove laminate decors.

elka OAK SCOTIA  
PROFILE

The elka Oak Scotia Profile is made from  
lacquered real wood veneer and provides  
the perfect finish to a newly installed elka real  
wood engineered or solid wood floor.

L 2.4m

Oak scotia profile can be glued or nailed for  
quick and easy placing. The perfect finish for  
your solid or real wood engineered floor.

CARING FOR  
YOUR ELKA FLOOR

It's so easy to care for your elka floor.  
Laminate flooring is not only easy to clean,  
it's hygienic too. In fact, the sealed surface  
prevents bacteria accumulating on the  
floor which is great for the prevention of  
allergies. In general, we recommend dry  
cleaning the floor with a microfibre duster.  
Occasionally, damp cleaning can be done  
using an almost dry mop. Never use a  
steam cleaner or wet mop your elka floor  
as this will cause damage not covered  
by the warranty.

Real wood engineered and solid wood  
floors are natural products that improve as

the floor ages, but to keep them looking  
in top condition you can top up the oil or  
lacquer finish. Daily cleaning requires little  
more than a good sweep or dry mopping.  
By quickly wiping up any spills immediately,  
you can prevent stains occurring. You can  
spray on a spot cleaner to deal with the  
mess quickly and easily. More stubborn  
scuff marks can be tackled with a specialist  
remover, minimising the risk of damaging  
your floor.

Follow these simple steps to ensure that  
your floor remains looking good for many  
years to come.

DAILY  
MAINTENANCE

- Sweep or vacuum your floor regularly to  
prevent grit and dust accumulating and  
scratching the surface.
- Use protective pads under all furniture  
to prevent scratches.
- Use door mats at your external doors  
to prevent grit and small stones being  
carried into the home.
- Wipe up any spills immediately. Never  
allow any liquid to remain on the floor.
- Stains should be removed immediately  
while they are still wet and after removal,  
wipe floor dry.
- Do not use general household cleaners  
as these may dull or damage the surface.  
They may even leave a film residue which  
could make the floor slippery and more  
difficult to clean.

PERIODIC  
MAINTENANCE

Oiled and lacquered finish real wood floors  
benefit from reapplication of elka protector  
approximately once every six months. The  
advantage of this very simple maintenance  
step is that, with regular treatment, you can  
keep your floor looking as good as new. It  
also 'tops up' the protective barrier against  
abrasions, scuffs and stains.

In areas of high traffic, for example, in a  
hallway, your floor may start to look a little  
worn. You can treat this particular area as  
and when you feel necessary, to keep it  
looking in tip top condition.

EVERYTHING YOU NEED TO  
MAINTAIN YOUR ELKA FLOOR

An easy way to keep your floor in tip top condition.  
Our elka range is designed to be quick and easy to use, no specialist polishing  
required. Perfect for today's modern lifestyle, leaving you time to enjoy your home!

CLEAN+  
PROTECT

FOR **OILED** OR **LACQUERED**  
REAL WOOD FLOORING

Clean + Protect kit for **oiled** real wood flooring

This kit contains everything you need to clean and protect your **oiled** wood floor. Contents include an All Purpose Cleaner, an All Purpose Cleaner Concentrate and a Protector specially formulated for oiled real wood flooring.
